☞ The word *multiplication* is sometimes used in mathematics, particularly in multiple algebra, to denote any distributive operation expressed by one symbol upon any quantity or any thing expressed by another symbol. Corresponding extensions of meaning are given to the words *multiply, multiplier, multiplicand*, and *product.* Thus, since $\phi(x+y)=\phi x+\phi y$ (see under DISTRIBUTIVE), where $\phi(x+y)$, ϕx, and ϕy indicate the results of any distributive operation represented by the symbol ϕ upon $x+y$, x, and y, severally, then because of many very useful analogies $\phi(x+y)$ is called the *product* of ϕ and $x+y$, and the operation indicated by ϕ is called *multiplication.* Cf.
